Course Name: Psychology, History and Memory

Course ID	Course Code	Theory	Practice	Credits	ECTS	Semester
50068902	HIST 444	3	0	3	6	7

1. Course Contents

Memory has attracted attention of researchers from various fields since the 70s. Naturally, every discipline has its own perception of what memory is and how it works. The objective of this course is to lay a mutual groundwork by evaluating the literature in both cognitive psychology and history, and by synthesizing the language that has been used in these fields. Throughout the semester, students will learn specific terminologies each discipline's methodology requires, observe said disciplines' take on memory, and read the articles from their particular viewpoints. Finally, the importance of inter-disciplinary studies will be stressed in reference to memory.

Course ID	Course Code	Theory	Practice	Credits	ECTS	Semester
50005285	PSY 314	3	0	3	6	6

1. Course Contents

This course takes an interdisciplinary approach to examine how evolutionary processes have adaptively shaped the human mind. A biological perspective is used to examine the genetic processes that contribute to phylogenetic variations and heritability and archeological evidence is used to show how humans have evolved over time. These and other approaches (e.g. anthropology) are used to understand why people behave in the ways that they do. Topics include, but are not limited to natural and sexual selection, altruism, inclusive fitness, mating strategies, homosexuality, warfare, and suicide. This course places special emphasis on using the evolutionary perspective to generate new testable hypotheses.

Course Name: Collective Memory

Course ID	Course Code	Theory	Practice	Credits	ECTS	Semester
50085049	PSY 376	3	0	3	6	6

1. Course Contents

Collective memory is an area of study that has received widespread interest from different fields of social sciences, including history, sociology, anthropology and political science. Although social aspects of remembering had been underlined early on in psychological research (Bartlett, 1932), only recently have psychologists started to empirically investigate collective memory. This course will mainly cover the psychological approach to the study of collective memory. Because of the interdisciplinary roots of the topic, we will inevitably discuss articles from different fields of social sciences. Our objectives in this course will be to understand the concept of collective memory, explore the various ways it has been studied in different disciplines and discuss how psychology can further contribute to the study of collective memory.

Course ID	Course Code	Theory	Practice	Credits	ECTS	Semester
50005354	PSY 441	3	0	3	6	7

1. Course Contents

This course provides an in-depth exploration of memory. It examines the neuronal memorial processes (e.g. long-term potentiation), types of memory (e.g. implicit vs. explicit), developmental changes in memory over the lifespan (e.g. changes in synaptic density), and how neuropathy affects memory (e.g. amnesia). Additional topics include representational issues, source monitoring, memory distortions, expertise, and the binding problem.

1. Course Contents

Drawing on research in social, cognitive, clinical, and developmental psychology, this course attempts to show how psychological science can be used to enhance the gathering of evidence, improve legal decision-making, reduce crime, and promote justice. Emphasis will be on how research and theory can deepen our understanding of key participants (e.g., criminals, police, victims, lawyers, witnesses, judges, and jurors) and basic psychological processes (e.g., decision-making, persuasion, perception, memory, and behavior change) in the legal system

Course Name: Motivation and Emotion

Course ID	Course Code	Theory	Practice	Credits	ECTS	Semester
50005299	PSY 461	3	0	3	6	7

1. Course Contents

Motivation is about human needs and desires. It addresses the general question “Why do we do what we do?” Emotion is largely a reflection of the extent to which these needs and desires are fulfilled. In this course, we will examine the motivational and emotional factors that activate, guide, and sustain our behavior. Special emphasis will be on the nature of intrinsic and extrinsic motivation, and their consequences for both emotion and behavior.

1. Course Contents

A review of fundamental concepts and tools of mathematics to develop the students' understanding and skills of basic mathematical ideas, tools and techniques. Students will learn mathematical reasoning, to relate mathematical tools and concepts with their everyday life, thus using mathematics effectively to make better decisions throughout their lives. They will develop basic modeling skills with examples from nature, engineering, economics, music and arts. Active tutorials will provide them with hands-on practice for solving problems. A review of fundamental algebra will help them work comfortably with symbols and expressions. Simple team projects will encourage them to do research on a given topic, summarize findings and present them to an audience in a compact and attractive way. Regular class attendance with weekly preparation is needed.

Course Name: Critical Reading & Writing in Turkish I

Course ID	Course Code	Theory	Practice	Credits	ECTS	Semester
50000593	UNI 111	3	0	3	5	1

1. Course Contents

The aim of this course is to describe what ‘text’ signifies, discuss the basic features of oral, printed and electronic text forms and analyze these forms with examples from daily life. The course is designed to discuss how the idea of text acquires variety in cultural life. Firstly, the focus will be on the production, circulation and reception processes of the text. Afterwards, the textual styles produced by oral culture, written culture and printed culture will be addressed in continuity with the conditions of their historical genesis. The basic features of oral culture and literary forms based on orality will be described, after which the traces of oral culture in daily life will be discussed. With the aim of demonstrating how writing and reading practices have been affected by the advent of the printing press, the main features of textual forms before printing will be presented and the printing press’s transformation of these features will be showed. After the evaluation of the role of the printing press in the formation of the modern notion of literature, the features specific to each form of printed text with a low level of fiction, such as newspaper articles, columns, articles and essays will be discussed with examples. In this course based on in-class discussion, after the main concepts are presented, the students are expected to discuss different textual forms and afterwards write essays, which analyze different aspects of these forms. Thus the students will have a firsthand experience of the production, circulation and reception practices of the text.

1. Course Contents

This course has been designed to discuss how the idea of text acquires variety in cultural life. Firstly, the objective will be to describe the basic methods of textual criticism. Afterwards, these methods will be applied to examples from the literary forms of novel and poetry. Critical approaches specific to each form will be shown. The course will lead from the printed text to the visual text and at the first stage of this, the focus will be on the relationship between theater and literature. Through the reading of the written text of a play and the watching of its performance, the relationship between text and performance will be discussed. At the second stage the relations between film and literature will be analyzed; the discursive and thematic qualities of film adaptations from literary texts will be shown. At the last stage, the textual forms of electronic culture will be determined and the specific features of forms such as entries and blogs will be explored in a comparative relation to oral and printed texts. The course will end with a general discussion of the concept of text departing from the various types of text seen during the two semesters. In this course based on in-class discussion, after the presentation of the main concepts, the students are expected to discuss different textual forms and afterwards write essays analyzing different aspects of these forms. Thus the students will have a firsthand experience of the production, circulation and reception practices of the text.

Course Name: Understanding Society and Culture

Course ID	Course Code	Theory	Practice	Credits	ECTS	Semester
50004167	UNI 117	3	0	3	5	1

1. Course Contents

This course, through familiarizing students with the basic concepts, themes and research agendas in the field of sociology, will introduce the participants to the understanding of the complexity of societies and cultures with the aim of developing a sociological imagination in the minds of the participants. It will try to make students involve in multiple ways of looking at the “familiar” world, societies, histories, and self but also to give them a sensibility towards the “unfamiliar” world of “others”. They will gain awareness of the major domains of individual and social life, and some major institutions including the self, everyday life, class and poverty, identities, racism, gender, city and modernity. The subjacent idea is that, in order to comprehend the changing world, one has to be able to use the tools of sociological analysis which are in constant transformation; and also one has to develop a critical and creative approach in the face of continuities and discontinuities of social and cultural lives.

50000592	UNI 203	3	0	3	5	1

1. Course Contents

This course is designed as an introduction to the basic principles and concepts of physical and information sciences, and the comprehension of scientific information and the understanding of issues of science and technology in contemporary society. The course is suitable for students with backgrounds in both natural/physical and social sciences. It allows students in physical and information sciences to think more critically about the impact and consequences of their work on society. It allows students from social sciences to develop a critical understanding of the role of science and technology in the world. The basic goal of this interdisciplinary course is to cross some of the assumed and traditional boundaries drawn between physical and social sciences. The purpose of the course is the study of how scientific and technological innovations affect social, political and cultural values, and how these in turn affect science and technology. Goals of the course include understanding the relationship between society and scientific and technological innovation, and the directions and risks of science and technology. The issues of ethics and how it relates to science and technology practices will also be discussed through several case studies. Examples will span a variety of areas from computer science to biomedicine, from neuroscience to physics, genetic modification and mathematics.

1. Course Contents

This course explores the state of the current environmental/ecological crisis, the proposed solutions to the crisis, and the way nature of science we practice is related to state of the natural world around us. After a summary of the different aspects of the crisis, the course discusses the most direct causes behind the crisis and the nature of the mainstream environmentalism. Next, the course explores the deepest causes of the crisis which help to explain why mainstream environmentalism has largely failed to turn the tide of environmental degradation in the last 40 years. Finally, how do the alternative approaches, including religious environmentalism, might have more comprehensive answers to the crisis?

Course Name: Understanding Religion

Course ID	Course Code	Theory	Practice	Credits	ECTS	Semester
50037176	UNI 207	3	0	3	5	3

1. Course Contents

The course will be on two parts. The first part is about history of world religions and the second one is about understanding religion within the context of state and society. After a general introduction to the historiography, methodologies and thematic issues of the history of world religions, we will discuss the key concepts in the field such as "religion," "spirituality," the idea of "sacred," "primitive religions," "world religions," etc. This part of the course will have special attention paid to the historical development of early religious traditions and major world religions, such as Hinduism, Buddhism, Judaism, Christianity and Islam. Students will be introduced to the belief systems, worldview, ideals, ethics and rituals of each tradition. We will compare certain aspects of religions but we won't focus on theological comparisons, (this is not a course on comparative religions), rather the course will focus on understanding the origin, process of formation, historical development and spread of world religions. Several contemporary issues will be discussed, such as including "fundamentalism," "radicalism," "response to modernity," "women's spirituality," and "the future of religion," and etc. In the second part of the course, we will focus on the interactions between religion and state and between religion and society from the historical, political, and sociological perspectives.

Course Name: Understanding Cultural Encounters

Course ID	Course Code	Theory	Practice	Credits	ECTS	Semester
50045135	UNI 209	3	0	3	5	3

1. Course Contents

This course offers an overview of the cultural - historical relationships emerged in Near Eastern Islamic countries and their neighbors between 11th and 17th centuries C.E, by the eyes of remarkable travelers such as Ibn Fadlan (Arab), Nasir Khusrow (Persian), Ibn Battuta (Moroccan-Berberi), and Evliya Celebi (Turkish-Ottoman). The main goal of this course is to give a clear, understandable frame of cultural - intellectual relations for the Islamic world in the classical ages, by the eyes of Muslim travelers. To understand the nature of cultural and intellectual interactions among Muslims, Hindus, Sufis, politicians, traders, warriors and professional entertainers of this era, a modern researcher must review historical narratives from different authors, with comparing to each other. It is obvious that a historical - cultural event cannot be understood only by giving basic facts in a chronological order. Drawing the historical picture with the help of travel accounts, including daily life practices, legends, and colorful stories will make the students enjoy intellectual history of that era.

Course Name: Understanding Art

Course ID	Course Code	Theory	Practice	Credits	ECTS	Semester
50045138	UNI 211	3	0	3	5	3

1. Course Contents

An introduction to art and architecture, the course is intended to give a general survey of artistic and architectural culture with an emphasis on visual representation and architectural expression. Basic tools of analysis and methodologies for the interpretation of works of art will be introduced. The course focuses not only on the visual culture of mankind in its historical and geographical dimensions, but will also address fundamental questions about the nature and scope of "art" and "architecture". Dimensions of aesthetic experience, taste and meaning of art will be explored. Questions of identity through material culture, of influence, interactions and divergences, of artistic production and patronage will be investigated. The topic of each lesson will be taught aided by power point and audio visual material. This is a course highly based on visual understanding and visual literacy.

Course Name: Understanding Design

Course ID	Course Code	Theory	Practice	Credits	ECTS	Semester
50106638	UNI 212	3	0	3	5	3

1. Course Contents

This course aims to give insight to the students from different backgrounds how design thinking help map and find solutions about various types of problems with an analytical and methodological approach. The course starts with the analysis of some design products in order to see what kind of approaches were used to solve problems designerly, independent from scale and context (design, architecture, visual communication design, graphic design etc.) Students are required to evaluate and reflect upon the built environment and artifacts by using some methods and approaches in design thinking and exploration. Following that, it is required from students to develop new design problem statements and solutions. User and human centered approaches and methods which are essential in design thinking are introduced and experimented.

Course Name: Understanding Ethics

Course ID	Course Code	Theory	Practice	Credits	ECTS	Semester
50058920	UNI 213	3	0	3	5	3

1. Course Contents

This course gives an introduction to ethics as a sub-discipline of philosophy. The course covers the main ethical theories like virtue theory (Plato and Aristotle), Utilitarianism (Bentham and Mill), and deontological theories (Kant). It also examines the question of whether there exist moral principles that are objective and valid for all people and societies or whether the validity of such principles depends on culture or even on individual choices as relativists claim. Other topics of the course include psychological and ethical egoism, the nature of values, and the questions of why to be moral and how to live a good life and achieve happiness. The course aims at helping students to reflect on a variety of moral and ethical problems about which everyone constantly has to make choices and decisions throughout one's life.

Course Name: Music And Civilization

Course ID	Course Code	Theory	Practice	Credits	ECTS	Semester
50084824	UNI 219	3	0	3	5	3

1. Course Contents

This course aims to study the common thread between music and civilization. We will demonstrate that music is one of the showcases of civilization in terms of beliefs, values, and worldview. Although our focus will be on the Turkish music, ample examples will also be provided from various musical traditions around the world, both traditional and contemporary. Comparisons between music and other areas of civilization like architecture and poetry will be used to enable the student to fully realize, grasp and utilize civilizational principles. We will also cover how music reflects social change in both Ottoman-Turkish and Western civilizations.

Course Name: World Civilizations and Global Encounters: Until 1300 CE

Course ID	Course Code	Theory	Practice	Credits	ECTS	Semester
50004173	UNI 221	3	0	3	5	1

1. Course Contents

World Civilizations and Global Encounters is a two-semester compulsory university course providing a cross-cultural overview of world history from ancient to modern times. The course proceeds chronologically, but has the objective of exploring crucial themes of human activity from a global perspective. The diversity of human civilizations will be traced in terms of their historical, cultural, political and economic formation with a special emphasis on their interactions, similarities and differences. The ultimate aim of the course is to reflect on the concept of historical change and its connotations for the present day.

Course Name: World Civilizations and Global Encounters: Since 1300 CE

Course ID	Course Code	Theory	Practice	Credits	ECTS	Semester
50004176	UNI 222	3	0	3	5	2

1. Course Contents

This course will start with a discussion of the concept of early modernity and its application to post-1300 world history. In the following weeks, the lectures will explore the dynamics, factors and paths of specific historical change in different regions of the world from the 15th century onwards. Major topics of discussion will include the Renaissance and Reformation in Europe; the state, society and culture in the early modern Middle East; transformations in European feudalism; the revolutions of 1789 and 1848 in Europe; Safavid and Mughal empires; the changing dynamics of Ottoman imperial power in relation to the Habsburg, Russian and Chinese empires; and the question of modernity. Issues regarding the transformations in the political, cultural, ideological and institutional make-up of different imperial structures that ushered in the modern era will remain a focus throughout the survey.
